DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 4/5/2007 have been fully considered but they are not persuasive. On page 9, line 9 of the arguments, the applicant admits that Denyer et al. discloses a device that calculated a dose over multiple inhalation. Denyer et al. delivers a dose of medication over a plurality of breathes. The applicant argues the Denyer et al. does not teach a trend generator. The examiner disagrees. The device of Denyer et al. teaches a micro-controller. The micro-controller analyzes breath information and characteristic of the patient's breathing (col. 7, lines 17-21). Therefore, the micro-controller would contain circuitry that functions a trend generator.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1, 6-8, 13, 14, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Denyer et al. 6584971.

The applied reference has a common Assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome

Application/Control Number: 09/930,582

Art Unit: 3734

either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131. Denyer et al. teaches a system and method for delivery of a drug to a patient comprising: a drug delivery device arranged to delivery a dose of the drug to the patient over a plurality of breaths, the device including a breath analyzer which (i) analyses a patient's breathing during the drug delivery, wherein the analysis by the breath analyzer includes quantitatively measuring at least one parameter of the patient's breathing; and (ii) generates breath information on a patient's breathing during drug delivery wherein the breath information includes the at least one quantitative measurement of the patient's breathing (col. 3, lines 28-39); a data carrier (col. 3, lines 34-35); a data analyzer (col. 3, lines 36-37) and a trend generator (col. 7, lines 17-21); and wherein the breath information includes inhalation time and a total number of pulses, and wherein the breath information includes inhalation time and a total number of pulse, and wherein the data analyzer calculates a mean inhalation time value by dividing the total inhalation time by the total number of pulses (col. 1, line 63 – col. 2, line 16); wherein the breath information includes inhalation time and exhalation time and wherein the date analyzer calculates an inhalation to exhalation ratio value by dividing the total inhalation time by the total exhalation time (col. 11, lines 17-28).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Page 3

Application/Control Number: 09/930,582 Page 4

Art Unit: 3734

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being obvious over Denyer et al. in view of Denyer et al. 6192876.

The applied reference has a common Assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(l)(1) and § 706.02(l)(2).

6. Denyer et al. teaches the system according to claim 1. It should be noted that Denyer et al. fails to teach wherein the data analyzer includes means for identifying non-compliant use of the drug delivery device.

Application/Control Number: 09/930,582 Page 5

Art Unit: 3734

7. Denyer et al. 6192876 teaches a system with a common means for identifying non-compliant use of a device (col. 3, lines 35-38). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the means for identifying non-compliant use of Denyer et al. to warn when the apparatus is not delivering treatment properly.

Allowable Subject Matter

8. Claims 9, 10, 11, 15, 16, and 17 are allowable over the prior art of record.

Contacts

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael G. Mendoza whose telephone number is (571) 272-4698. The examiner can normally be reached on Mon.-Fri. 9:00 a.m. - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Hayes can be reached on (571) 272-4959. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
